

SKANDIA WINDOW FASHIONS®

VINYL SHUTTERS

SIMPLY STUNNING  
SUNQUEST® SL300

**SKANDIA'S SUNQUEST® SL300 VINYL SHUTTER** is simply stunning. Skandia has sourced the best material for manufacturing its state-of-the-art vinyl shutter line. When the best materials are combined with Skandia's American craftsmanship the result is top-notch.

### **PVC Cellular Vinyl**

The SL300 is a solid cellular PVC that is an excellent insulator, waterproof and self-extinguishing. It will not rot and is termite-proof. It is extruded with a cellular finish that resists dings and scratches. It is virtually maintenance-free, and cleaning is a breeze.

### **Traditional Look**

The look and quality your customers desire and below the cost of wood shutters.

### **Dove-tail and Mitered Corner Joints**

These features facilitate shipping and quick assembly of frames. They provide a cabinet-looking finish so that no other trimming is required.

### **UV Painted Finish**

Our solid shutters feature a water-based paint finish that is treated with a UV protectant.

### **Four Exclusive Color Options**

Skandia offers three color options to match our most popular wood blind colors: Ultra White (344), True White (346), Alabaster (352), and Almost White (365), all in a sleek gloss finish.

### **Core Material Complements Finish**

The SL300's core material is formulated to complement the painted finish. This means the shutter color is the same throughout the entire shutter.

### **Stainless Steel Staples**

All panels are made with stainless steel staples that will not rust or corrode. The staples also feature a self-qiuing capability that ensures secure attachment during manufacturing.

### **Divider Rail Placement**

Skandia's SunQuest SL300 offers the option of placing the divider rails to your specifications with little-to-no migration. This allows the designer to keep a uniform look while adding shutters to different-sized windows.

### **Hard Shell Finish**

Skandia offers the exclusive celluca finishing process. This process results in a finish that is low maintenance and has excellent impact and skin durability.

### **Hinge Options**

Choose from hinge colors that match our louver colors of True White, Almost White, Antique Brass, Brass, Nickel Satin and Oil Bronze to create the look that matches the decor.

### **Paintable Surface**

The SunQuest® SL300 louvers are painted with a high grade water-based paint that can be repainted for after-market customization.

### **Additional Insulator**

This helps reduce heating and air conditioning costs, also reduces outside noise.

### **Environmentally Friendly**

The SL300 is made almost entirely of recyclable materials. This allows our shutters to be considered environmentally friendly and not add to waste management problems.

### **Waterproof**

The SL300 is ideally suited for above kitchen sinks and in bathrooms or other high-humidity areas. The stainless steel staples Skandia uses will not rust and the shutters will not warp or crack.

### **Proudly Manufactured in America**

SunQuest® SL300 Shutter frames, stiles and louvers are engineered and extruded in the USA and the complete shutters are custom built in Skandia's manufacturing facilities.

### **Warranty**

SunQuest® SL300 Shutters have a 10-Year Limited Warranty.

Manufacturing Quality Custom Window Coverings for over 50 Years!
